Luke Macken <lmacken@redhat.com>

[overview]

- History of Fedora updates
- bodhi
 - goals
 - features
 - architecture
 - using
 - testing/qa
 - hacking
 - future ideas

[history of fedora updates]

- **FC1 -> FC3**
 - Flat file in CVS to keep track of updates
 - All communication done by hand
 - Update notifications generated and sent by developer
 - Much pain an suffering ensued

[Fedora Update System]

•FC4 -> FC6

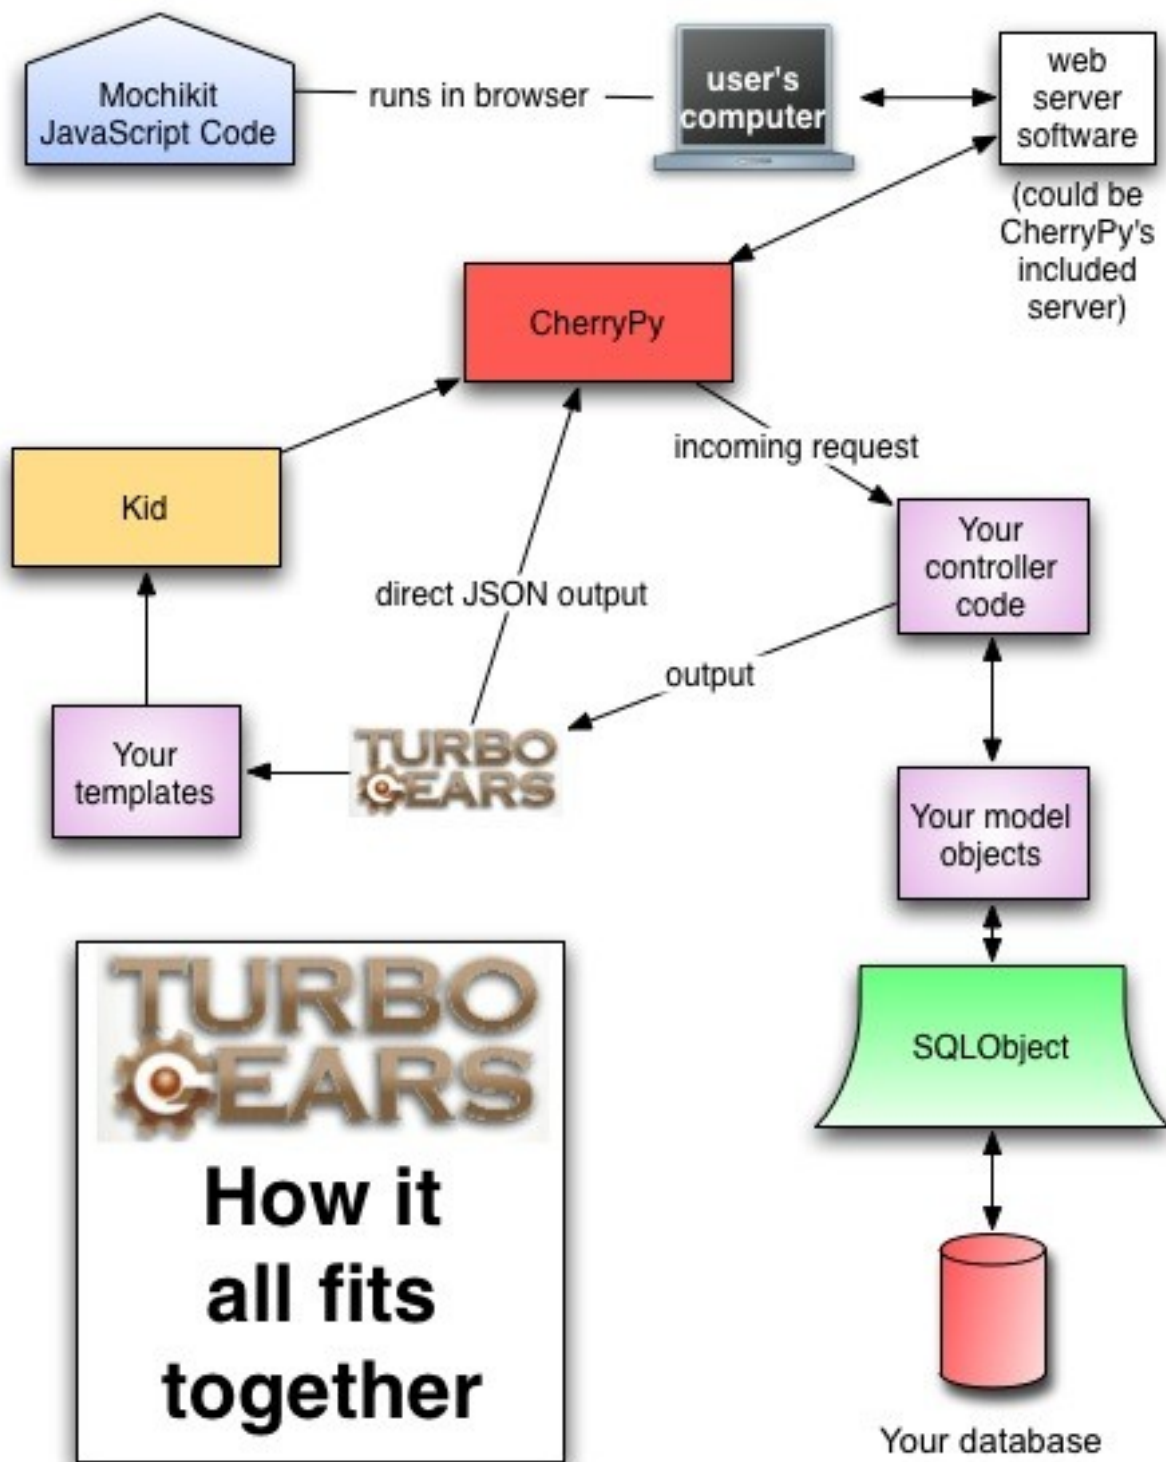

- Provided a simple web interface for submitting updates
- Internal to Red Hat
- Maintained a single stage of repositories by adding/moving/removing packages when necessary
- Streamlined many tasks, including all developer->releng->user communication, and various repository maintenance tasks
- Innovated extended update metadata, which has been adopted by yum, pup/puplet, and various other tools

[goals]

- Provide an intuitive interface for developers and release engineers to manage pushing package updates for multiple distribution releases.
- Ensure package quality and repository sustainment with automated testing
- Encourage community testing and involvement through allowing people to easily test updates and provide feedback
- Provide a modular framework that will allow future integration to various other QA and developer tools.

[architecture]

- Written using the TurboGears Python web framework
 - **Model:** SQLAlchemy [<http://sqlalchemy.org>]
 - **View:** Jinja2 [<http://jinja2.pocoo.org>]
 - **Controller:** CherryPy [<http://cherrypy.org>]
- A modular piece of the Fedora Infrastructure stack
 - Utilizes the **Koji** Buildsystem for tracking RPMs
 - Composes repositories using **Mash**
 - Integrated with the **Package Database**
 - Utilizes python-bugzilla to alter the states of bugs

[architecture]

•Masher

- Multi-threaded mash dispatcher
- TurboGears extension that runs alongside bodhi
- Takes a Koji tag (ie dist-fc7-updates), and uses mash to compose the update repositories

[using]

- Add update details via web-form, command-line tool, or 'update' Makefile target.
- Request that your update be pushed to the Testing or Stable repo.
- Go and do something productive.

python-cherrypy-2.2.1-8.fc8

Builds: [python-cherrypy-2.2.1-8.fc8](#) [[logs](#)]

Release: [Fedora 8](#)

Update ID: FEDORA-2008-0299

Status: stable

Type: security

Bugs: [427664](#) - CherryPy security hole still unpatched: Malicious cookies may allow access to files outside the session directory

Karma: 😊 1

Pushed: True

Date Pushed: 2008-01-07 00:47:22

Submitter: toshio

Submitted: 2008-01-06 20:35:50

Close bugs: False

Notes: Security issue fixed with a backport from upstream.

Comments:

[testing / qa]

- Updates, by default, get pushed to updates-testing before being released to the stable updates tree.
- Each update has a “karma”, which is effected by how many positive/negative comments it has received.
 - 'stable_karma' configuration option to automatically mark updates as stable after it has reached a specified karma.
 - 'unstable_karma' lower threshold for automatically removing unstable updates
- `bodhi –testable` lets users see what updates-testing packages they have installed, which they could potentially be providing useful feedback for.

[hacking]

- Easily run a local bodhi instance with production data

```
# yum install TurboGears python-TurboMail koji mash yum-utils mercurial
$ hg clone http://hg.fedoraproject.org/hg/hosted/bodhi ; cd bodhi
$ tg-admin sql create && ./init.py && ./dev_init.py
$ ./pickledb.py load bodhi-pickledb-*
```

- Extensive test suite using Nose, a discovery-based unittest extension.

[metrics]

Fedora 7 Updates

[future ideas]

- **Upstream monitoring using Fever**

- “FEver (FEedora versions) aims to be a simple and easy way to track upstream changes in Fedora's repository”

- **fedora-qa integration**

- Aurelien Bompard has written a great tool that is used during initial package reviews.
- “The aim of this script is to test all the MUST items in PackageReviewGuidelines which are not covered by rpmlint”

- **Beaker integration**

- The ability to kick off regression tests to an external lab.
